Ceridian Chooses Carpathia for Compliant Managed Hosting Highly-reliable Solution Supports Over 2.7 Million Military Personnel

Ashburn, VA – July 14, 2010 - Carpathia Hosting, the leading provider of enterprise managed hosting services for government agencies and enterprises, was chosen by Ceridian Lifeworks to supply federally compliant managed hosting services in support of Ceridian's contract with the Department of Defense to provide Military OneSource (MOS) services.

Military OneSource provides information and one-on-one support to all active-duty, National Guard and Reserve personnel and their family members. These resources, available 24/7 via telephone and online, address the unique needs of the military community, such as deployment or reintegration support, as well as everyday issues including relationships, parenting, finances and health and well-being.

As use of Military OneSource increases with eligible users totaling over 2.7 million military personnel and their families across the world, data security is an increasingly important area of concern for Ceridian.

"We needed to find a hosting provider with experience managing federal systems with very sensitive data. That, paired with Carpathia's ability to successfully complete the certification and accreditation process and obtain an authority to operate (ATO), quickly distinguished Carpathia as our hosting company of choice," said Brian Leary, vice president at Ceridian Health and Productivity Solutions.

From the ground up, Carpathia built and delivered a high availability and redundant solution, providing end users with reliable access to the benefits of the Military OneSource system. This compliant infrastructure has redundancy at every layer – from the network to the server architecture and storage components.

The solution also includes a mirrored facility utilizing Carpathia's Phoenix datacenter, providing the disaster recovery and continuity of operations (COOP) capabilities that are required to meet the government recovery point and recovery time objectives. In conjunction with Carpathia, Ceridian leverages IDS and scanning solutions like Retina, Gold Disk, and Nessus to maintain a highly secure environment.

"Carpathia is honored to be selected to assist Ceridian in serving military personnel and their families through the Military OneSource program," said Peter Weber, CEO of Carpathia Hosting. "Military OneSource is an invaluable resource for these soldiers, and we are proud to support the continued effort, providing these very important information and referral services, confidentially and around the clock."
