

MANAGED FIREWALL

Managed firewall solutions provide enhanced perimeter protection to your hosted infrastructure. Using the latest deep inspection™ technology, firewalls can identify and mitigate external attacks and unauthorized access. Not only do our security experts work closely with your team to design the right security policy to meet your specific requirements, but when you use the Carpathia Services Platform (CSP™), you can rest assured that the health and performance of your firewall is continuously monitored.

HIGH PERFORMANCE

Our Juniper firewall appliances use ASIC-based technology to provide high performance without sacrificing packet identification and inspection. This same technology is also applied to VPN and routing engine, providing you with confidence that your performance needs will always be met.

MANAGED SERVICES

Carpathia managed services are included with all dedicated and virtual firewalls. Managed services start with the design and installation of your firewall policy, and include 24x7 monitoring of the availability, performance and status of your firewall. By using CSP, customers can submit and track changes to their firewall policy, which in turn provides reporting for many of today's regulatory compliances.

OTHER FEATURES

With optional antivirus, anti-spam and Intrusion Prevention modules, firewalls can protect your users from a wide range of threats, such as worms, trojans, spam, phishing and application-level attacks. Whether you need dedicated or virtualized solutions, Carpathia has a solution to meet your firewall needs.

CAPABILITY	VIRTUAL FIREWALL	DEDICATED LEVEL 1	DEDICATED LEVEL 2	DEDICATED LEVEL 3
